# SlideWriter<sup>TM</sup> Film Recorder

## SlideWriter—The 35mm Slide Maker for Macintosh Computer Users!

The SlideWriter<sup>TM</sup> brings high quality 35mm slide production of Macintosh<sup>TM</sup> computer-generated graphics right to the side of your desk. This cost-effective film recorder is compatible with most graphics software

packages that run on Apple's<sup>®</sup> Macintosh personal computer family. SlideWriter is ideally suited to those environments where the utmost in quality output, versatility and ease-of-operation is essential.

# SlideWriter™ Film Recorder

For producing high-quality, slides from Macintosh images quickly, easily and inexpensively.

## Who can use it?

The SlideWriter produces the highest quality images in a variety of environments—business, design, education, government and many more. Marketing, sales and financial departments can make slides for meetings, training sessions, conferences and seminars; graphics artists can make visuals for package and product design; and, engineers can present new product ideas without the expense of prototype models.

## What makes it better?

The quality of your presentation graphics says a lot about your ideas and yourself. A SlideWriter transforms your Macintosh computer generated charts and graphs into presentation quality slides right at your desk.

- **The highest quality image.** The SlideWriter will generate film output at 8 times the resolution of the standard Macintosh monitor for the cleanest, sharpest, artist-quality images. The SlideWriter allows you to take full advantage of your Macintosh computer's features, including: creating images from color paint and draw programs; using text in any combination of styles, sizes or rotations; merging graphics with pictures; matching corporate logos and colors; and, imaging shaded, 3-D solid models.
- **Color consistency.** Brilliant, dynamic and repeatable colors are assured, day after day, month after month. The SlideWriter uses advanced microprocessor control to monitor and automatically compensate for environmental changes during the imaging process.
- **Up to 45 images per hour.** The SlideWriter was designed to meet the demands of today's fast-paced business environment. Whether you need slides for a presentation, or artwork for brochures, the

SlideWriter can output a wide variety of graphic images including business graphics, 3-D solids models and scanned images.

- **Easy to learn, easy to use.** The SlideWriter requires only simple operator procedures. It's as easy to use as a copier. Film loading and exposure can take place in regular office lighting. Film advances automatically.
- **Broad hardware and software compatibility.** The SlideWriter is compatible with the Macintosh Plus, Macintosh SE and the new color Macintosh II computers. Accompanying PICT file compatible utility software, featuring pull-down menu interface provides for easy pattern-to-color mapping; spooling; previewing; cropping and scaling. It also uses LaserWriter® compatible fonts on your images.
- **Low per slide cost.** Anyone who uses an outside service to produce 10 or more 35mm presentation slides a month is probably paying more than the monthly cost of bringing slide making in-house.

## SlideWriter Specifications

### INPUT

3 colors: red, green, blue  
Bits/pixel: 24 (8 each for red, green, blue)

### RESOLVABILITY (Horizontal x Vertical)

2048 x 1366 pixels or 4096 x 2732 pixels;  
software selectable

### FILM FORMATS

35mm rolls; 36 frame maximum

### BUILT-IN FILM TABLES

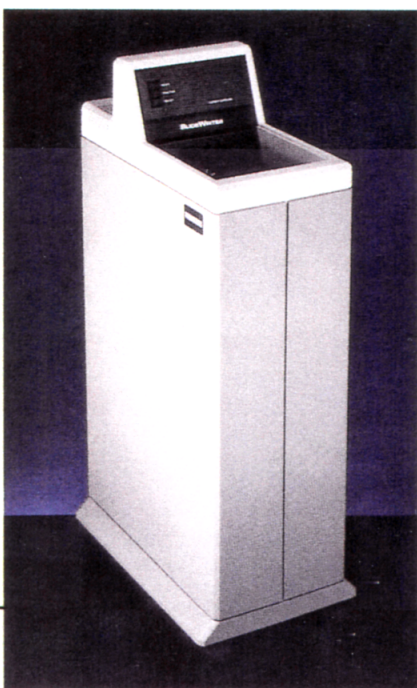

35mm Kodak Ektachrome ASA 100  
35mm Polaroid Polachrome (High Contrast)

### DATA INTERFACE

SCSI

### POWER REQUIREMENTS

110 VAC ±10%; 60 Hz; 1.5 A  
220 VAC ±10%; 50 Hz; 1 A

### DIMENSIONS

Length: 18 inches  
Width: 12 inches  
Height: 36 inches

### WEIGHT

42 pounds

### ENVIRONMENT

Storage: 0° C to 70° C  
Operating: 15° C to 30° C  
Relative Humidity: 35%-65%  
non-condensing
